

## **Fork Positioner for Forklift**

Fork Positioner for Forklifts - A fork positioner is actually an apparatus constructed out of high quality materials designed to endure the most challenging operations and work environments. This piece of equipment enables drivers to be able to operate the forks hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the arms or the entire load so as to facilitate more exact carrying and position in a quicker and more efficient way.

The fork pocket is quite unique and can enable the person operating it to be able to securely sway the blades into position without any worry of destroying the positioning cylinders. This can allow the driver the option to perform independent or simultaneous fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages can be transformed into fork positioners on available units.
